

Friend Corporation Pvt. Ltd.

Alimenta Industries Srl

The food industry has conceived several fruit processing systems for the production of jams and marmalades, concentrates, clear and pulpy juices as well as diced fruit for yogurts. Alimenta Industries Srl can be relied for the most advanced technologies for the above mentioned products.

Alimenta offers both hot and cold extraction systems. The specially designed pulpers/refiners are fitted with particular rotors for minimizing wastes. It also offers simple double or triple effect evaporators with different production capacities. The enzymatic inactivation system completes the line to prepare juices for a possible concentration. The forced circulation evaporators designed by Alimenta Industries Srl are based on the well-established experience in the specific field. The range also includes scraped surface evaporators, suitable to concentrate particularly fibrous juices. The different available models are offered according to the required production capacities.

Storci SpA

Since 1991, Storci has been working in the pasta machinery sector. Their R&D Lab is equipped with state-of-the-art technologies. Storci Pasta Center is not a simple lab, but a real pasta factory equipped with Storci lines and totally able to produce at full capacity. It is based at Pasta di Canossa, a factory established by the family of the same name, which produces pasta using an Omnia line for multiformat dry pasta equipped for the production of instant pasta too.

Storci instant pasta lines: Instant pasta is a healthy product since it is natural and never fried and it puts together the properties of pasta with the quickness required for the fast pace of the modern life style. It has a very long shelf life although it is made with no preservatives at all. Instant pasta is a real Italian pasta in instant format. No specific knowledge is required to produce instant pasta since Storci provides all its know-how, from raw materials to packaging to the sauces. The customer should only have determination and investment possibilities. There is no need for a specific area, just a plant of approximately 1000/2000 sqm. The size of the packet is customizable depending on the target: from a minimum of 64-65 grams to a real full meal of 95 grams.

Baker Perkins

Baker Perkins' equipment and service drive the production and profit at world's leading food manufacturers. In the bread, biscuit, confectionery, snack and breakfast cereal sectors, top brands worldwide rely on technology supplied by Baker Perkins.
